faceLITE

WHY USE faceLITE?

As we age, skin becomes thinner and drier and develops sags and wrinkles. Changes in the connective tissue reduce the skin's strength and elasticity. This is known as elastosis.

faceLITE uses two clinically proven wavelengths of light, 633nm (red) and 830nm (near infra-red). At the correct energy levels, these wavelengths have been shown in clinical studies to stimulate collagen and elastin production and improve blood flow and tissue oxygenation which leaves skin looking rejuvenated, plumper and over time helps reduce the appearance of fine lines and wrinkles.

BENEFITS

Anti-aging:

Stimulates collagen and increases elastin within the skin; this in turn will help reduce fine lines and wrinkles.

We recommend a course of treatments: 3-5 treatments a week for 4-6 weeks.

Preventative:

faceLITE helps delay the signs of aging and with aging starting as young as 20 it's never too early to start with preventative action. Use alongside your existing skin care regime to ensure healthy, younger looking skin.

Special Occasions:

faceLITE will leave you with brighter, plumper looking skin after just one treatment. It also helps makeup to be applied more easily with a smoother, brighter complexion.

Mood Enhancing:

Proven to lift your mood in the winter months by increasing your serotonin levels which helps with Seasonal Affective Disorder (SAD).

98%

agree their skin felt firmer

After 3 treatments per week for 4 weeks

96%

agree their fine lines appeared less visible

After 3 treatments per week for 4 weeks
